

The background of the entire page is a dense, repeating pattern of white, three-dimensional hexagonal blocks. These blocks are arranged in a staggered, honeycomb-like fashion, creating a sense of depth and texture. The lighting is soft, casting subtle shadows that emphasize the 3D nature of the blocks.

INTRODUCTION

We are grateful that you took time to read and hoping you would join our telegram group and know more about us. To understand us is to understand our history.

Brief History

We are the batcoin community group meme token that was created out from scratch over a year ago February 28, 2022 a renounced contract name BATCOIN ticker BATS. The Smart contract has only 2% reflection tax deployed in Binance Smart Chain with very low initial liquidity of 1.2 BNB and locked for 1 year in MUDRA. The token has only \$500 starting Market Capital and had all time high of \$ 1.8M. It was unbelievable but true facts. It was an exciting moment for everyone and with all the emotions, hype, and effort that created the volume is truly amazing. Organically, relationship over the community grows that made the community aspire for project development. Unfortunately challenges are inevitable such as, CMC and CG listing that was not granted due to multiple listing by random members that trying to help with no technical understanding. Another challenge is that the team does not have marketing token to pay the marketing expenses and the nature of smart contract has no development taxes to fund the project development. Now our Liquidity will expire Feb 28, 2023 we decided to create and build milestone in Ethereum Network and focus more on a specific use case of our token. Community core decided to launch a better version of batcoin to bring us in new heights and continue the legacy that was created. There will be no turning backs and we will burn the Liquidity Pool forever.

PROJECT

Batcoin Supreme is a store value digital crypto DeFi USDC reflection token in ethereum network. The project has a secure web 3.0 Dapp INTEREST GENERATING TERM-DEPOSIT CRYPT made in a user-friendly interface for staking tokens and project NFTs. Bitcoin provides an option for time deposit and rate of returns without locking the tokens for emergency withdrawal. BATCOIN token holders will have access to unique UTILITY TOOLS that provides live data and metrics via PERMISSIONLESS SERVICE PLATFORM such as Swap, Porfolio Tracker, Customized Multi-charting, Crypto Watchlist and Crypto-Fiat Integration.

TERMINOLOGY

Smart Contract - is a self-executing contract with the terms of the agreement between buyer and seller being directly written into lines of code

Ethereum Network - is a decentralized blockchain platform that establishes a peer-to-peer network that securely executes and verifies application code, called smart contracts.

Web 3.0 - is a decentralized internet built on an open blockchain network that is not owned and controlled by large entities.

Dapp - is a decentralized application is a type of distributed open source software application that runs on a peer-to-peer (P2P) blockchain network rather than on a single computer.

Reflection - is the mechanism that gives token holders a percentage of the transaction tax imposed when a native token is traded. Distribution is equitable to all liquidity pool providers, based on their share of the pool.

BATCOIN - Is the ticker or token symbol of the smart contract deployed by the project name Bitcoin Supreme

ETH - Is the ticker or symbol of the crypto currency Ether and use as a gas payment in Ethereum Network for transaction.

Burn Token - is a process of removing coins from the overall supply of a cryptocurrency sending the coins or tokens to genesis null address
0x00. It's the black hole

equivalent in the ethereum community that swallows every token sent to it without remorse and never refunds anything back. It is a wallet with no known private keys which means all tokens sent to the address are lost permanently.

Burn Liquidity - is the process of sending created LP tokens to ethereum burn address 0x00dEaD. The term “burning” is a metaphor for sending tokens to the null address and has a higher safety mechanism than “locking” tokens because locked tokens can be unlocked but burned tokens can’t be retrieved.

Locked Tokens - refers to a specific period of time in which cryptocurrency tokens cannot be transacted or traded. Typically, these lockups are used as a preventive strategy to maintain a stable long-term value of a particular asset.

Liquidity Pool - is a collection of digital assets accumulated to enable trading on a decentralized exchange (DEX).

DEX - are decentralized crypto exchanges that offer access to digital assets without an intermediary. Instead of relying on a company to fill and record crypto trades, DEXs offer peer-to-peer (P2P) token swaps using blockchain technology and use smart contracts to execute trades.

ECOSYSTEM

ETHEREUM VIRTUAL MACHINE

BATCOIN HOLDERS - This are token holders from old and new token that supports the project and holding the price by accumulating BATCOIN in their wallet and receiving rewards of Ether Reflection.

BATCOIN TRADERS- This are token holders who are constantly trading tokens by buying low and selling high to earn more tokens or profit. The traders also increase the trading volume and pay transaction fees for liquidity, reflection and development tax.

STAKER - This are investor that deposit BATCOIN and NFTs to the Dapp INTEREST GENERATING TERM-DEPOSIT CRYPT for a period of time to support the project at the same time earn an interest in batcoin tokens from treasury reserved.

BATCOIN CORE - Are the team who created the token, develop the project and maintain the token ecosystem.

BATCOIN ADMIN - Are the technical support mainly in the telegram and discord.

MOD - Are selected volunteer moderators that make sure the community conversation are according to the rules and regulation to protect the project from FUD.

BATCOIN ARMY - These are loyal batcoin supporters who do extra miles in promoting the project and protect their batcoin holdings.

UNISWAP - is a DEX in ethereum that uses a set of smart contracts to execute trades on its exchange. It's an open source defi project that uses smart contracts to facilitate token trades.

BATCOIN DAPP - Are decentralized web 3.0 made exclusively for batcoin holders use-case related to staking, NFTs, portfolio tracking, and trading.

STAKING PROTOCOL - To earn rewards, you commit your cryptocurrency and NFTs to the platform, which is known as staking. That platform then pays you a rewards rate on your deposit. If you want to stop, you can unstake your deposit.

PERMISSIONLESS SERVICE PLATFORM - Are DAPP with features of Swap, Porfolio Tracker, Customized Multi-charting, Crypto Watchlist and Crypto-Fiat Integration.

TOKENOMICS

NAME: Bitcoin Supreme
 Ticker: Batcoin
 Decimal: 8

TOTAL MAX SUPPLY: 31,000,000

INITIAL BURN: 9,300,000

LOCKED TOKENS: 11,780,000

INITIAL CIRCULATING SUPPLY: 9,920,000

TRANSACTION TAX: 6%

TAX BREAKDOWN
 DEVELOPMENT: 4%
 AUTO LP BURN: 1%
 USDC REFLECTION: 1%

ALLOCATION

SMART CONTRACT

Batcoin smart contract has a unique USDC reflection features. The reflection mechanism gives token holders a percentage of the transaction tax imposed when a native token is traded. Distribution is equitable to all token holders. Smart contracts ensure that the reflection process is fully transparent and executed instantly. Batcoin provide investors with another way to earn income, encouraging investors to hold rather than trade their tokens. This promotes market stability and allows investors to profit, even if they don't have the time available to constantly monitor the market. a result, reflection token holders do not need to lock their assets for a certain period to earn rewards. In most cases, they earn their income almost instantly when a transaction is made, with the functions governed by a smart contract.

REFLECTION REWARDS

Reflection is financed by taxing network transactions. Therefore, Batcoin transactions has extra gas fees to facilitate distribution.

BatcoinSupreme Taxing fee for rewards is 1% for every buy, sell and token transfer, from which the reflection is paid. Great news is that it's not a big deal if you HODL since you are also getting a part of the paid fee back as long as you have it in your wallet. This is a long term project and as long as there are transaction you will be receiving stable coins in your wallet passively. The fees charged are then immediately redistributed to investors, usually according to the size of their holdings. The reward is stable coin USDC with contract address [0xA0b86991c6218b36c1d19D4a2e9Eb0cE3606eB48](#) The distribution of reflections happens every 30 mins, thanks to the advanced blockchain technology. The contract has a minimum threshold before holders would be able to see it in their wallet. Some will take some time, some are visible instantly depending on the daily volume. Reflection tokens help stabilize a coin's supply. Since earning rewards encourages holders to hold. This is also promoted by the higher fees, which prevent large price drops, reduce volatility, and keep investors committed to the project.

Note:

Reflection tokens do not guarantee consistent returns, given that the yields depend on the asset's daily volume. A token may generate zero yields in the event of no transaction activity of the token.

TERM DEPOSIT

Another unique features of batcoin is the decentralized INTEREST TERM-DEPOSIT CRYPT. It is the same function as staking where any batcoin holders can deposit crypto assets for a set period of time to help support the project. In return for staking your batcoin and NFTs, you earn more batcoins as a reward and the longer the term the higher the rewards.

TRADITIONAL BANKING SYSTEM.

With a traditional centralized bank deposit term deposit, you lock away an amount of money for an agreed length of time (the 'term') – that means you can't access the money until the term is up. In return, you'll get a guaranteed rate of interest for the term you select, so you'll know exactly what the return on your money will be.

WHAT MAKES BATCOIN UNIQUE?

Many defi also function the same with the traditional bank system that they locked the asset and can only access after the maturity date. We don't criticize the good idea of stake and rewards of locking asset it just that we don't do it. Instead, we put function for anyone to withdraw their token instantly. This will give more assurance and lower the risk because stakes can exit the platform anytime if needed. For emergency withdrawals the earned profit interest are deducted by the protocol by 50% as a fee for not completing the commitment of the term. The platform offers a great interest yield compare to reflections to encourage the community to stake.

NON FUNGIBLE BATS

The batcoin supreme NFTs are in 3D design of BATS with status symbol of an EMPEROR, KING, CROWNED PRINCE, PRINCES, DUKE and KNIGHT and each has its own rarity and can only be minted in our platform. There will be 4 Emperors only in the entire season, 10 Kings, 30 crowned Prince, 50 Princes, 100 DUKE and 300 Knights and no more can be minted.

Unique use case as follows; Owner can be tag by choice of their NFB status symbol in the telegram and discord kingdom. Each NFB will have a voting value in the batcoin community for development project in the future, NFBs can also serve as a COLLATERAL CERTIFICATE for loan system in the bat kingdom and most importantly it has a special staking vault that yield interest.

FAQ

How to connect my wallet to batcoin dapp?

Go to www.batcoinsupreme.com and upper right click launch app and and click connect your wallet.

How to buy and mint NFBs?

Go to www.batcoinsupreme.com and click NFT link and choose the desired NFT and click mint.

How to stake and withdraw my Batcoin?

1. Go to www.batcoinsupreme.com and click STAKE link to the staking vault.
2. Connect your wallet to the dapp and deposit your desired number of batcoin tokens.

When will I receive my ETH reflection?

Batcoin reward system is triggered by volume (buy + sell activity to cover gas fees). Payouts to holders may not occur if the trading volume is low. However, the amount of Ethereum each holder are accumulated until a certain threshold to trigger the reward.
